

SFDB_FindHLDY

Last Modified on 01/19/2017 12:18 am CST

- C/C++
- .Net

```
int __stdcall SFDB_FindHLDY(LONG      argDate,
                            LPCTSTR argHolidays,
                            LPTSTR  retVal,
                            size_t *  nLen
)
```

Returns the holiday code that falls on the given date.

Returns

status code of the operation

Return values

NDK_SUCCESS Operation successful

NDK_FAILED Operation unsuccessful. See [SFMacros.h](#) for more details.

Parameters

[in]	argDate	is a serial date number that represents a given date
[in]	argHolidays	is a (:) separated list of holiday codes
[out]	retVal	is the holiday code that falls on the given date
[in,out]	nLen	maximum number of characters to copy to the buffer.

```
int __stdcall SFDB_FindHLDY(Long      argDate,
                            string      argHolidays,
                            StringBuilder retVal,
                            ref UIntPtr  nLen
)
```

Returns the holiday code that falls on the given date.

Returns

status code of the operation

Return values

IntegerHoliday Code

Parameters

[in] **argDate** is a serial date number that represents a given date
[in] **argHolidays** is a (:_:) separated list of holiday codes
[out] **retVal** is the holiday code that falls on the given date
[in,out] **nLen** maximum number of characters to copy to the buffer.

Remarks

- 1.
- 2.

Exceptions

Exception Type	Condition
None	N/A

Requirements

Namespace	NumXLAPI
Class	SFDBM
Scope	Public
Lifetime	Static
Package	NumXLAPI.DLL
