

NDK_HIST_BIN_LIMIT

Last Modified on 04/15/2016 12:38 pm CDT

- C/C++
- .Net

```
int __stdcall NDK_HIST_BIN_LIMIT(double * pData,
                                  size_t nSize,
                                  size_t nBins,
                                  size_t index,
                                  WORD argRetTYpe,
                                  double * retVal
)
```

Returns the upper/lower limit or center value of the k-th histogram bin.

Returns

status code of the operation

Return values

NDK_SUCCESS Operation successful

NDK_FAILED Operation unsuccessful. See [SFMacros.h](#) for more details.

See Also

[NDK_HISTOGRAM\(\)](#)

Parameters

[in] **pData** is the input data series (one/two dimensional array).
[in] **nSize** is the number of elements in pData.
[in] **nBins** is the input number of bins for the histogram.
[in] **index** is the bin index or order; e.g. 0=1st bin (default), 1=2nd bin,..., N-1.
[in] **argRetTYpe** is a switch to select the return output (0=lower limit (default), 1=upper limit of the bin, 2=center of the bin).
[out] **retVal** is the computed value.

```
int NDK_HIST_BIN_LIMIT(double[] pData,
                        UIntPtr nSize,
                        UIntPtr nBins,
                        UIntPtr index,
                        short argRetTYpe,
                        ref double retVal
)
```

Namespace: NumXLAPI

Class: SFSDK

Scope: Public

Lifetime: Static

Returns the upper/lower limit or center value of the k-th histogram bin.

Return Value

a value from [NDK RETCODE](#) enumeration for the status of the call.

NDK_SUCCESS operation successful

Error Error Code

Parameters

- [in] **pData** is the input data series (one/two dimensional array).
- [in] **nSize** is the number of elements in pData.
- [in] **nBins** is the input number of bins for the histogram.
- [in] **index** is the bin index or order; e.g. 0=1st bin (default), 1=2nd bin,..., N-1.
- [in] **argRetTYpe** is a switch to select the return output (0=lower limit (default), 1=upper limit of the bin, 2=center of the bin).
- [out] **RetVal** is the computed value.
