

NDK_X12_RUN_BATCH

Last Modified on 03/14/2016 1:34 pm CDT

- [C/C++](#)
- [.Net](#)

```
int __stdcall NDK_X12_RUN_BATCH ( LPCSTR  szScenarioName,  
                                LPCSTR  szBatchFile,  
                                LPWORD  status  
                                )
```

Run a batch file in x12a environment.

Returns

status code of the operation

Return values

NDK_SUCCESS Operation successful

NDK_FAILED Operation unsuccessful. See [Macros](#) for full list.

Parameters

[in] **szScenarioName** is the given X12-ARIMA scenario/model identifier

[in] **szBatchFile** is the batch file generated for the scenario

[out] **status** is the status code for running the batch file

Remarks

1. The underlying model is described [here](#).
2. In majority of the cases, you would not call this function directly, but, instead, call NDK_X12_RUN_SCENARIO.
