```

## **I wish to use NumXL with XYZ language, but I don't see a wrapper library for it. Are you going to build one?**

Last Modified on 03/18/2016 1:25 pm CDT

The SDK is a collaboration between our engineers and users. Once we establish the demand for new languages, we will create a project repository on GitHub and invite you and others who expressed interest in this SDK to join.

We hope and encourage you and everyone interested will help us with development and testing.
