Are all NumXL runtime executables digitally signed and secure? Should I sign my application too?

Last Modified on 03/24/2016 1:29 pm CDT

Yes. All our DLL are securely digitally and signed with our code-signing certificate. Also, all 3rd Party libraries are code-signed by their vendors.

You don't have to digitally sign your custom application, but we highly recommend it. Customers will not receive pop-up windows warning about unknown publishers.
